

Mt Fresh Tomato

Lycopersicon 'Mt Fresh' (Determinate type)

- **Use:** You'll love this easy-care, heavy-bearing midseason beauty, and you'll really appreciate how vigorous and healthy it remains throughout the growing season. This plant is resistant to verticillium wilt and fusarium wilt, which both wreak havoc on more hapless varieties. The fruit is crack-resistant, and the plant is tolerant of root knot nematodes. In other words, coupled with the tolerance of rainy and cool conditions, Mountain Fresh is one of the most adaptable and tough tomatoes on the market!
- **Exposure/Soil:** FULL SUN! Soak to depth of 6 to 10 inches when watering. They need at least 6 hours of direct sunlight a day. Tomatoes hate red clay so use a good soil such as our peat mix.
- **Growth:** Grows 36" tall and 36" wide or more depending on type. Plant tomatoes 2"-3" deeper than current soil line for a sturdy plant.
- **Hardiness:** Zone 9-11, Annual, houseplant. 79 days from setting out transplants.
- **Foliage:** Small, lacy leaves.
- **Fruit:** Ranging in size from 8 to 16 ounces, these bright red fruits are firm, with a good blend of solids and gels. A determinate plant, meaning that it has a bushier form (rather than a continuously-growing vining habit) and sets its crop of fruit within a short several-week period. This is useful for anyone planning to store the tomatoes: if you want to can them, freeze them, sun-dry them, or otherwise turn the crop into delicious eating for later, determinate is ideal for you.

Terrifically disease-resistant plants set a big crop in midseason
