

Emerald Blueberry Bush

A new patented variety from Florida, Emerald bears extremely heavy crops of large, sweet and flavorful, medium-blue berries. Great for growing in regions with mild winters.

Vaccinium corymbosum 'Emerald'

- **Use:** Produces abundant crops of the largest Southern Highbush berries with a mild, sweet flavor. Its rounded, spreading bush habit make it a great landscape plant. Dependable in southern climates with a low chill requirement of 250 hours.
- **Exposure/Soil:** Prefers light, acid soils (pH 4.5-5.2) with high organic matter (20-50%) are preferred, unlike most fruit crops.
- **Growth:** *Moderate grower to 4-5 ft. tall and 5 ft. wide.*
- **Hardiness:** Zone 8-10; Shrub
- **Pollination:** *Although blueberries are self-fertile, cross-pollination produces the best fruit crop (larger berries and larger yields). Therefore, it is best to plant more than one variety that will bloom at the same time.*
- **Foliage:** Deciduous. Bluish-green foliage.
- **Flower:** Emerald bears the largest fruit in its class. These handsome, rounded spreading plants yield heavy harvests of cascading bunches of huge, light blue berries that are delightfully sweet. ***More info from UGA on our website on the PLANT INFORMATION PAGE.***
