

Ground Orchid

Very easy to grow
orchid for the beginner!

Spathoglottis plicata

- **Use:** People view an orchid as some sort of exotic, and difficult to grow plant, when they really aren't. Enjoy these in the home or out on the patio.
- **Exposure/Soil:** Need bright light, even full sun, for strong, sturdy growth in the home. Outside they prefer morning sun and afternoon shade. These orchids are generally forgiving of water frequency and quality. Be sure to water copiously, letting water drain out of the bottom of the vessel, to prevent mineral buildup in the mix. Keep the roots moist year round, but, as for most orchids, do not let the plant sit in water.
- **Growth:** 12-24" tall depending on type.
- **Hardiness:** Houseplant
- **Foliage:** Long glossy green leaves.
- **Flowers:** Many different colors available.
