

Butter & Sugar Siberian Iris

Sun
loving
and
very
easy
to
grow!

Iris siberica 'Butter & Sugar'

- **Use:** Possibly the most important color break in Siberian Iris breeding. The large, shapely flowers are carried on 28in stems, and in our gardens we find that the colors blend superbly with every other Siberian Iris.
- Their thick roots drive down deeply, which makes them drought resistant (though they also thrive in damp soil) and great plants for holding steep banks in place. Each clump becomes huge, and when a group of them grows together, weeds can't grow in between.
- **Exposure/Soil:** Plant in full sun to partial shade, in fertile well drained soil. Use slow release fertilizer two times a year.
- **Growth:** Grows 30" tall. Divide every 3-4 years. Space new container grown plants 18" - 36" apart.
- **Hardiness:** Zone 5-8 Perennial
- **Foliage:** Deciduous. After bloom, the grassy leaves stand erect and green through the growing season.
- **Flower:** This Currier McEwen cross offers falls of bright butter yellow between neat white standards. Siberian Iris often begin to flower in late May through June.
